

TESTIMONIAL – DR WARRICK BISHOP

We were honoured to have Dr Warrick Bishop, a highly regarded cardiologist, at the Australian College of Nursing's signature annual leadership event, the National Nursing Forum 2019 (NNF) as a keynote speaker presenting on cardiac CT imaging plaque assessment in clinical practice.

As primary health care givers and the first point of contact for patients for assessment, it is vital for nurses – especially those in the cardiovascular and preventive care field – to be aware of technological advancements that could impact their patient's health. Dr Bishop's detailed and engaging presentation gave the delegation an insightful and holistic overview of this potentially life-changing technology.

Warrick is a renowned leader in his field, but what impresses me most is the importance he places on valuing all clinicians by translating very complex scientific evidence into a language and platform that is accessible and easier to understand. As nursing is a 90% female-dominated profession, and heart disease is the leading cause of death, his teachings have the potential for great impact.

Warrick is generous, passionate and determined. Nurses respect people who have these qualities and are genuine and as such Warrick was warmly received and highly regarded by our 600 delegates. On behalf of every nurse leader at NNF, I would like to extend my thanks to Dr Bishop for sharing his vision and invaluable work with us.

Adjunct Professor Kylie Ward
Chief Executive Officer
RN, MMgt, Dip App Sci (Nursing), Acute Care Cert, FACN, FCHSM, Wharton Fellow, MAICD
